**Subject:** GMO

I am personally asking the USDA to require...

1. Text labels stating which ingredients are genetically engineered on the package, and to prohibit the use of [QR codes](#).
2. Labels for highly refined ingredients that come from GMO crops (like corn syrup), even if no GMO material is detected.
3. Labeling of products made with "gene-editing" and modern biotechnology in the law because the genetic sequences that create bioengineered foods are made in a lab and are unique.
