Potato Flakes and Granules:

- A. All bags shall be capable of withstanding the following performance test for impact resistance:
  - (1) Ten filled and sealed bags shall each survive a single drop test on the butt and side on a shock machine that produces for each test a velocity change of 195 inches per second using a shock duration of .002 seconds without loss of product.
  - (2) Testing shall be conducted under standard temperature (73.4°F plus or minus 1.8°F) and relative humidity (50% plus or minus 2%) conditions.
  - (3) Filled bags shall be placed in the conditioned atmosphere for sufficient time before the tests are conducted for the bag materials to reach equilibrium.
  - (4) Bags submitted under this performance specification shall conform to all other applicable material, construction, and performance specifications.

B. Potato Granules:  
 The performance test procedures for both 10kg, 20 kg granule bags outlined above will not apply to this packaging construction, however successful test results (International Safe Transit Association (ISTA) series 2A to include compression, shock and vibration) from a packaging lab are required.

C. Test Laboratories  
 The contractor may use any independent or private laboratory that is capable of conducting the performance test for impact resistance described in Section 2.5.A. However, the Government is aware of only the following domestically located independent or private laboratories that have such capability:
